Art Unit: 1755

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 13, drawn to a composition, classified in class 106, subclass 287.1.
- II. Claims 12 and 18-21, drawn to a method, classified in class 427, subclass 585.
- III. Claims 14-17, drawn to an article, classified in class 428, subclass 408.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a coating for window glass in order to filter certain wavelength ranges out of sunlight. See MPEP § 806.05(d).

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by a materially different process such as diffusing or filtering barrier coatings to the carbon material.

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a coating for window glass. See MPEP § 806.05(d).

Art Unit: 1755

During a telephone conversation with Hugh P. Gortler on 22 September 2002 a provisional election was made with oral traverse to prosecute the invention of Group I, claims 1-11, 13. Affirmation of this election must be made by applicant in replying to this Office action. Claims 12 and 14-21 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention. Subsequently, this application has been transferred to Primary Examiner David M. Brunsman.

Claims 1, 10, 11 and 13 are generic to a plurality of disclosed patentably distinct species comprising 1) non-stoichiometric silicon and carbon 2) non-stoichiometric silicon and oxygen 3) non-stoichiometric silicon and nitrogen 4) compounds of silicon, oxygen and carbon 5) compounds of silicon, oxygen and nitrogen 6) compounds of silicon, nitrogen and carbon and, 7) silicon. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Hugh P. Gortler on 14 April 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
